

OIB - Other: NOAA P-3 05/14/16 Science Report

Aircraft:

Other: NOAA P-3

Date:

Saturday, May 14, 2016

Mission:

OIB

Mission Location:

Kangerlussuaq, Greenland

Mission Summary:

Mission: Southwest Coastal A (priority: baseline)

This mission is one of two (with Southwest Coastal B) designed to mirror the southeastern coast-parallel coverage in the southwest, along 2011 LVIS flight lines. This particular flight captures the lowest-altitude portion of this part of the ice sheet. We also overfly a total of six PROMICE sites.

A stable high pressure air mass dominated all of southern Greenland today, yielding ideal flying conditions for our last baseline-priority land ice mission in the far south. Temperatures were rather warm as well, both on the ice sheet (see supraglacial water photo below) and at Kangerlussuaq where the donning of even a light jacket was debatable this morning. Cloudiness continued to dominate the west-central portion of Greenland today, including the Jakobshavn region and Summit.

All instruments performed normally today, and neither ATM nor DMS experienced unusual fouling of their respective windows from hydraulic fluid.

Overall, we estimate successful data collection across 100% of the flight, a mission first for the current campaign.

Tomorrow (Sunday) is a well-earned rest day for the field team after 6 days of successful science flights and an embedded move from Thule to Kangerlussuaq. The weather forecasts for next week are very favorable for flying over the Jakobshavn basin and our other remaining baseline-priority science targets.

We conducted a ramp pass over Kangerlussuaq at 1200' AGL.
